

# ASK BLOSSMAN:

Propane Cylinder Safety

## 4 PROPANE GAS CYLINDER DO'S AND DON'TS

1. Never use or store a propane cylinder in your home or any other enclosed space, such as a garage.
2. When transporting a cylinder, or when it is not in use, keep it secure in an upright position with the cylinder valve turned off.
3. Make sure to read the warning labels attached to the cylinder.

4. Don't use, store, or transport propane cylinders where they can be exposed to high temperatures because the pressure relief valve may open, allowing amounts of gas to escape.
